

Elementary

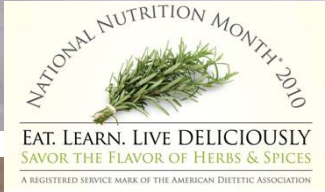

To celebrate National Nutrition Month, elementary teachers were given the opportunity to receive the materials to have their students plant their very own Parsley Plant.

We were able to visit some classrooms and join them as they used recycled milk cartons to plant parsley seeds.

As you can see in the picture in the top right, the plants have already begun to grow.

Secondary Schools

Chef Tables were set up in select secondary schools. Each table had information about herbs & spices as well as the actual fresh and dried herbs.

Students could play to win an iPod Shuffle* by guessing the "Mystery Herb" ...

Here is a hint... It's a green leafy Herb with curly leaves. You can garnish your plate with it...

Based on clues like these and being able to see, touch, and smell this mystery herb; students were able to guess this mystery herb ... PARSLEY.

*The correct answers were placed into a drawing at each table to award 1 winner of an iPod shuffle
